

Comprehensive Visual Analysis: Torpedo Magnetic Proximity Fuze System:

This comprehensive visual analysis presents all aspects of the torpedo magnetic proximity fuze simulation through detailed diagrams, tables, and performance charts, providing complete technical documentation of the system's theoretical foundation, practical implementation, and operational performance.

System Architecture and Design

Torpedo magnetic proximity fuze system architecture showing engagement geometry, detection principle, and signal processing flow

Magnetic Field Analysis and Enhancement

Comprehensive performance analysis of torpedo magnetic proximity fuze showing field strength, enhancement factors, signal processing, and detection capabilities

Signal Processing Architecture

Seven-stage signal processing flowchart for torpedo magnetic proximity fuze system

Engagement Trajectory and Timing

Trajectory and timing analysis showing torpedo-ship engagement geometry, closing distance, and system status timeline

Enhancement Factor Optimization

Enhancement factor analysis showing how proximity, directional, size, and wake factors combine to boost magnetic field detection

Detection Range Performance

Detection range analysis showing probability zones and signal strength versus distance for magnetic proximity fuze system

Performance Validation Dashboard

Magnetic Field Visualization

Magnetic dipole field detection schematic with torpedo approach geometry
